

PERFORMANCE ANALYSIS OF RECURRENT NEURAL NETWORKS (RNN) FOR POWER AMPLIFIER (PA) MODELING

Supervisor : Germain PHAM
 Email : dpham@telecom-paris.fr
 Phone : +33 1 23 45 67 89
 Duration : 6 months
 Degree : Master
 Fields : (Computer Science, Electrical Engineering) Machine learning, Optimization, Signal processing, Communication systems
 Start date : 2024-04-01

Palaiseau (France), February 23, 2024

You can find all the internship offers at: [Job & Internship opportunities at Télécom Paris](#)

The current offer is available at: [Performance analysis of recurrent neural networks \(RNN\) for power amplifier \(PA\) modeling](#) Please check the webpage for the latest information.

Introduction

This internship project is a continuation of the ICS Mini-Project [Teaching the Backpropagation Through Time Algorithm](#). It is highly recommended to achieve this mini-project to apply for this internship project.

This project is eligible for extension to a PhD thesis.

Project description

PAs are electronics devices that amplify the power of a signal, but they also introduce distortion into the signal. This distortion can be problematic for communication systems, so it is important to have accurate models of PAs in order to design and optimize communication systems.

RNNs are a type of machine learning model that are well-suited for modeling sequential data, such as the time-domain waveforms of PA signals. RNNs have been shown to be effective for modeling the behavior of PAs, but there is still room for improvement.

This project aims to evaluate the performance of different types of RNNs (like GRU or LSTM)

for modeling the behavior of PAs. The training of the RNNs will be done using the BPTT algorithm (hence the requirement to achieve the mini-project).

The project will give students the opportunity to learn about the latest advances in RNN technology and to apply their knowledge to a real-world problem. The project will also give students the opportunity to develop their research and development skills.

In addition, the project is likely to be of interest to industry partners, so students who complete this project may have the opportunity to pursue employment opportunities after their internship.

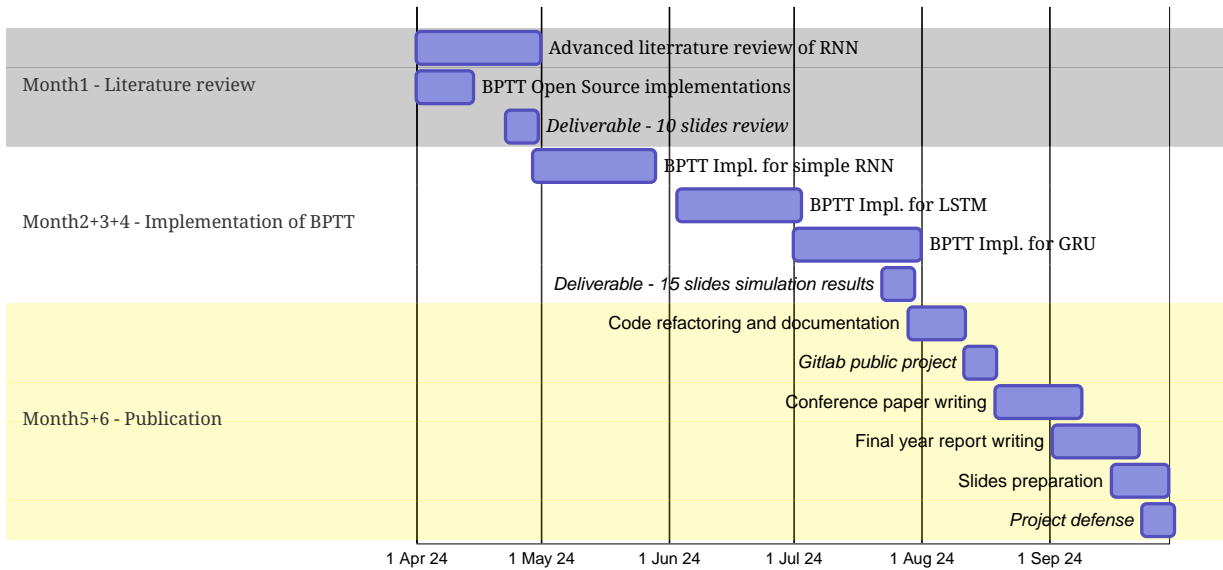

Required skills

This project requires a good knowledge of machine learning concepts, such as neural networks, gradient descent, and backpropagation.

- Mandatory
 - Signal processing
 - Matlab programming experience (matrix manipulation, computing, programmatic plotting)
 - practical elements of Latex (writing equations)
 - practical elements of `git`
 - Linux OS basics (usage of `terminal` command lines, `ssh`, `make`,...)
 - BPTT algorithm (see the mini-project)

Workplan (6 months)

ICS Internship: RNN PA Modeling

Application

Please send your application to the internship supervisor (please see headings). Your application should include :

- a CV,
- a cover letter,
- your academic records,
- a recommendation letter from a professor or a previous internship supervisor.

Deadline for application: 1st March 2024.

Upon reception of your application, we will contact you for an interview. The interview agenda is usually as follows :

Duration	Activity
15 min	Presentation of the candidate's academic (and professional) background to highlight the skills, experiences and any element relevant to the internship
15 min	Presentation of the internship project and the host team by the supervisor
15 min	Open discussion
10 min	Short test on either signal processing or Matlab programming
10 min	Discussion on the short test

Location

School

[Télécom Paris](#) trains its students to innovate in today's digital world. Its training and research cover all fields of information and communication sciences and technologies with a strong societal foundation in order to address the major challenges of the 21st century. It offers engineering, PhD and professional degree programs, with international students accounting for 55% of its student body. Its research offers original, multidisciplinary world-class expertise in nine strategic areas: Data Science and Artificial Intelligence—Visual and Audio Computing, Interaction—Digital Trust—Innovation Regulations—Transformation of Innovative Firms—Cyber-Physical Systems—Communication Systems and Networks—Mathematics and Applications—Uses, Participation, Democratization of Innovation.

As a founding member of Institut Polytechnique de Paris and an IMT (Institut Mines-Télécom) school, Télécom Paris is a living laboratory that fosters practical solutions and applications while measuring their impact on society.

📍 Address: 19 place Marguerite Perey, 91120 Palaiseau, France

[Find us on Google Maps](#)

Hosting laboratory

[Laboratoire Traitement et Communication de l'Information \(LTCI\)](#)

Research team

The [Circuits et Systèmes de Communication \(C2S\)](#) team is internationally recognized for its ability to integrate digital intelligence into AMS and RF SoCs such as analog-to-digital converters (ADCs) or RF receivers for cognitive radio. By combining its expertise in the physical realization of the CMOS chip with its experience in signal processing and its knowledge of the other network layers for which LTCI's skills are recognized, the group designs high-performance AMS and RF SoCs. The aim is to develop elements or "building blocks", enabling the system of connected objects to be interfaced on one side with the physical world via sensors, and on the other side with the system core via communications, in particular RF.

FAQ

Will I be paid?

You will receive a stipend, the amount is approximately 350€/month.

How to accomodate my stay in France?

There are several student residences in the vicinity of the campus. Further information will be provided upon demand.
